

REGENERATION AT AN LAM RETREATS SAIGON RIVER

At An Lam Retreats Saigon River, we encourage our guests to make the most of their stays by contributing to the sustained growth of the environment and the local society. Being environmentally friendly and socially responsible can be intertwined with a relaxed stay through diverse initiatives conducted by the resort, ranging from energy efficiency, no plastic policy, water & waste management, social commitment, and natural protection.

The resort manages its own crystal water refinery, producing high-quality drinking water without using plastic bottles. An organic vegetable garden also supports the ultimate aim of self-sustained food and beverages, drastically reducing the environmental footprint. Wherever possible, the packaging is kept to an absolute minimum or is reusable.

THE RESORT AND SURROUNDINGS

Every aspect of the resort is designed to work in harmony with the environment, committed to preserving and nurturing our tropical home. The landscaping concept for this resort is habitat restoration. The authentic river tropical environment is maintained and supported by using only plants and trees indigenous or endemic to Binh Duong.

The design

During the construction of An Lam Retreats Saigon River, much care was put into designing the resort following the contemporary concept with local essence. The intelligent ecological architecture helps minimize the need for air conditioning and lighting, at the same time, reduces the need for energy. In addition, the use of locally sourced natural materials--Thanh Hôa granite stone, Bat Trang ceramic mosaic, and hand-made rattan furniture--creates a true feeling of a luxury lifestyle resort built around nature.

Solar water heaters

Solar power is being used to heat water for all the guests' villas.

Air conditioning

All of the air-conditioning units use low environmental impact refrigerant.

BEST PRACTICES

Recycling

An Lam Retreats Saigon River tries to recycle all the things we have in large amounts.

Food waste

All vegetable and fruit scraps are sent to our compost to produce organic fertilizer used in our organic garden.

Organic Garden

Nothing can ever compare to the fresh taste of handpicked fresh vegetables from our home-grown garden. To grow high-quality, organic vegetables, we use left-over food and vegetables for composting and manure at our farm. Our chicken farm nearby stands proud as we source our fresh eggs for use throughout the resort's F&B outlets.

Regen Lab

Regen Lab introduces different sustainable initiatives that our guests can apply in daily life, such as learning how to make candles and soaps from used products. Regen Lab will also surprise our little guests with a range of fun activities to learn different techniques to recycle and reuse. We follow the 3R's (Reduce, reuse, recycle) to minimize the impact on the environment.

Water Bar

The resort's purified water system provides drinking water to all our guests and staff. Furthermore, to reduce the use of plastic, water is preserved in reusable glass bottles, making it healthier for the environment and better for our guests.

Buying Local

Complementing our fresh home-grown ingredients, we support our local suppliers by purchasing additional supplies for the resort. This initiative allows more natural and healthier consumption and facilitates a lower carbon footprint as local food does not require a shipping process or preservatives.
